

Dear Client:

If you are providing lenses to be used for the Irlen tinting process, please have your eye care professional or lens provider fill out and sign the form below. Let them know that you need either **Tintable** Hard Resin Plastic or Hi-Index Plastic lenses with absolutely no UV or Anti-Reflective Glare coatings. **We will not accept any lenses in the polycarbonate material.**

LensCrafters and Costco normally use the **Dura Lens**. Making and Irlen Filter from this material is not possible as the factory scratch coating is too hard and the lens will not absorb any color. Make sure you request tintable lenses.

All Progressive no-line multi-focal lenses come with the manufacturer's factory scratch coating. **All Hi-Index** thin lenses come with the manufacturer's factory scratch coating and UV400 filtering. We accept these lenses because there are no alternatives except **Rodenstock's Cosmolite Aspheric** lenses. This is a mid-index thin lens with no UV400 filtering.

**For RIMLESS FRAMES including Rimion Rimless and Drill Hole Mounted Lenses**, please send lenses only. **Do not send the lenses mounted in the frame.** Please make arrangements with your eye care professional for this service.

Please have your eye care professional check the appropriate box as it pertains to your lenses. If you or your eye care professional have any questions, please call the Irlen Institute International Headquarters in Long Beach, California, at 1-800-55-IRLEN or email at **lab@irlen.com**.

Sincerely,  
Carol F. Zuccone, Ed.D.

To: Eye Care Professional

This form must accompany the lenses to be submitted for the Irlen Filter process. Please place an X by the phrase that best describes the lenses being provided for tinting.

- Tintable Hard Resin Plastic
- Tintable progressive or hi-index lenses
- Tintable Trivex lenses (not always tintable)
- No scratch coating
- Factory scratch coating
- In-house scratch coating (not recommended as likely will not accept Irlen tint)
- Anti-reflection glare coating (not acceptable)
